OBJECTIVE

Experienced in building data pipelines, writing optimized SQL/Snowflake queries, and developing ETL workflows. Skilled in integrating multi-source datasets and delivering reliable, scalable data solutions that support analytics and business strategy.

EDUCATION

Bachelor of Engineering in Computer Science , Canara Engineering College, Bantwal	2021 - 2025
Percentage: 80.2%	
12th Grade - PCMB , Vivekananda Pre University College	2019 - 2021
Percentage: 82.5%	
10th Grade , Vivekananda English Medium School	2018 - 2019
Percentage: 86.40%	

TECHNICAL SKILLS

Programming	Python, Java, C, SQL
Libraries	pandas, NumPy, PySpark, SQLAlchemy
Frameworks	React, Node.js
Databases	MySQL, PostgreSQL, MongoDB, Snowflake
Tools	Git, Airflow, Postman, Power BI, Excel, Vercel

FULL-TIME EXPERIENCE

Pricing Strategy - Data Engineer , PriceEasy AI	Feb 2025 – Present
--	--------------------

- Built and automated pipelines that processed fuel price data from multiple branded and third-party sources, handling millions of records weekly.
- Scheduled hourly ingestion for high-priority stations, reducing latency of price updates from 24h to under 1h.
- Implemented daily ingestion for secondary sources, expanding data coverage across 5,000+ unbranded and branded stations.
- Designed ETL workflows in Snowflake, standardizing data through raw, helper, and integrated layers for analytics readiness.
- Optimized SQL queries that cut execution time by 30%, enabling faster competitor pricing and trend analysis.
- Applied validation and deduplication rules, lowering erroneous entries by 40% and increasing data reliability.
- Integrated multi-source fuel prices into centralized station “cards,” supporting accurate pricing strategy for end-users.

INTERNSHIPS

Software Developer Intern , Dregal I PVT. LTD	2024
--	------

- Built a personal portfolio website using ReactJS with **Hooks** for state management and **Tailwind CSS** for responsive UI design.
- Automated contact form handling with EmailJS and deployed the site on Vercel, achieving <1s page load times. *Portfolio Link:* [My Portfolio](#)

PROJECTS

Autoencoder-Based Adversarial Perturbation Detection	2024
---	------

- Designed an anomaly detection model using autoencoders trained on clean data to identify adversarial inputs.
- Measured reconstruction error to flag attacks with >90% accuracy in controlled test scenarios.
- Deployed modular architecture for real-time detection with visualization support.

Custom-Designed Music Streaming Interface

2025

- Developed a music UI with React, Tailwind CSS, and Framer Motion, featuring animated transitions and dynamic theming.
- Integrated APIs for albums and recommendations, enabling genre/year-based filtering for 1,000+ records.
- Optimized mobile responsiveness, ensuring consistent performance across devices.

Rubik's Cube Timer Application

2024

- Created a full-stack timer app using JavaScript and MongoDB with RESTful API support.
- Stored and analyzed solve times, automatically computing averages for performance tracking.
- Added authentication and deployed on Vercel for public use.

Helmet Detection using YOLO v10

2024

- Trained YOLO v10 model on curated datasets (via Roboflow) to detect helmets in real-time video streams.
- Preprocessed data, improving model accuracy by 15% compared to baseline.
- Built and tested the system in PyCharm, enabling scalable deployment.
