OBJECTIVE

Disciplined and dependable Computer Science student seeking to leverage full-stack development skills in a challenging role, with a focus on problem-solving and creating impactful web applications.

EDUCATION

Bachelor of Engineering in Computer Science , Canara Engineering College, Bantwal	2021 - 2025
Percentage: 80.2%	
12th Grade - PCMB , Vivekananda Pre University College	2019 - 2021
Percentage: 82.5%	
10th Grade , Vivekananda English Medium School	2018 - 2019
Percentage: 86.40%	

SKILLS

Languages	Java, C, HTML, CSS, JavaScript, Python, SQL
Frameworks	React, Node.js
Tools	Git, MongoDB, Power BI, Vercel, EmailJS, Excel, Snowflake, MySQL

INTERNSHIP

Product Analyst Intern , PriceEasy AI	2025
--	------

- Contributed to product analysis and data-driven decision-making to support pricing strategies.
- Improved product accuracy through high-quality data annotation and cleansing.
- Managed and analyzed large datasets using SQL and Snowflake, wrote complex queries to merge multi-source datasets.
- Identified competitor pricing and volume trends, providing actionable insights for market positioning.
- Used advanced Excel functions to validate data integrity, remove duplicates, and streamline reporting workflows.

Software Developer Intern , Dregal I PVT. LTD	2024
--	------

- Created a personal portfolio website using ReactJS, HTML, CSS, and EmailJS for contact form integration.
- Deployed the site using Vercel to ensure fast and reliable cloud hosting.

PROJECTS

Autoencoder-Based Adversarial Perturbation Detection	2024
---	------

- Developed a robust system for detecting adversarial attacks using autoencoders trained on clean data.
- Implemented an encoding-decoding mechanism to reconstruct input data and calculate reconstruction errors.
- Designed a reconstruction error-based mechanism to classify adversarial inputs with high accuracy.
- Created a modular architecture supporting real-time detection and output visualization.

Custom-Designed Music Streaming Interface	2025
--	------

- Built a responsive, genre-aware music UI using React, Tailwind CSS, and Framer Motion with dynamic theming.
- Integrated APIs for album data, personalized recommendations, and genre/year-based filtering functionality.
- Designed interactive components with animated transitions, horizontal scrolls, and grid-based layouts.
- Ensured mobile responsiveness, accessibility compliance, and deployed the application using Vercel.

Rubik's Cube Timer Application

2024

- Developed a full-stack web app for Rubik's Cube timing using JavaScript and MongoDB.
- Created a timer interface for solve times, stored data in MongoDB, and automated averages.
- Built RESTful APIs for secure backend management, integrated authentication, and deployed on Vercel.
- Implemented user-friendly features for tracking performance and sharing results.

Helmet Detection using YOLO v10

2024

- Developed a helmet detection system using YOLO v10 dataset from DataFlow.
- Utilized Roboflow for dataset preparation to enhance model training.
- Developed the project in PyCharm for a streamlined coding experience.
- Trained the model with high accuracy to detect helmets in real-time video streams.
